

# Product datasheet for MR216342L4V

## Cfi (NM\_007686) Mouse Tagged ORF Clone Lentiviral Particle

### **Product data:**

#### **Product Type: Lentiviral Particles Product Name:** Cfi (NM 007686) Mouse Tagged ORF Clone Lentiviral Particle Symbol: Cfi Mammalian Cell Puromycin Selection: Vector: pLenti-C-mGFP-P2A-Puro (PS100093) mGFP Tag: ACCN: NM\_007686 **ORF** Size: 1809 bp The ORF insert of this clone is exactly the same as(MR216342). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info This clone was engineered to express the complete ORF with an expression tag. Expression **OTI** Annotation: varies depending on the nature of the gene. **RefSeq:** NM 007686.2, NP 031712.2 **RefSeq Size:** 2073 bp **RefSeq ORF:** 1812 bp 12630 Locus ID: UniProt ID: Q61129 Cytogenetics: 3 59.21 cM

Gene Summary: This gene encodes a serine protease that plays an important role in the classical and alternative complement pathways where it cleaves C4b and C3b components of C3 and C5 convertases. The encoded preproprotein undergoes proteolytic processing to generate an active, disulfide-linked heterodimeric enzyme comprised of heavy and light chains. [provided by RefSeq, Jul 2016]
