Cemip (NM_030728) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cemip (NM_030728) Mouse Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: Cemip

Synonyms: 12H19.01.T7; 6330404C01Rik; 9930013L23Rik; AY007814; Kiaa1199

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(MR217955).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_030728

ORF Size: 4086 bp

Cemip (NM_030728) Mouse Tagged Lenti ORF Clone - MR217955L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 030728.4</u>

 RefSeq Size:
 7114 bp

 RefSeq ORF:
 4086 bp

 Locus ID:
 80982

 UniProt ID:
 Q8BI06

Cytogenetics: 7 48.35 cM

Gene Summary: Mediates depolymerization of hyaluronic acid (HA) via the cell membrane-associated clathrin-

coated pit endocytic pathway. Binds to hyaluronic acid. Hydrolyzes high molecular weight hyaluronic acid to produce an intermediate-sized product, a process that may occur through rapid vesicle endocytosis and recycling without intracytoplasmic accumulation or digestion in

lysosomes. Involved in hyaluronan catabolism in the dermis of the skin and arthritic

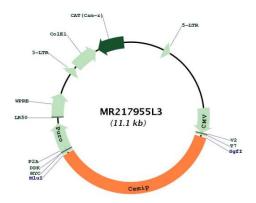

synovium. Positively regulates epithelial-mesenchymal transition (EMT), and hence tumor cell growth, invasion and cancer dissemination. In collaboration with HSPA5/BIP, promotes cancer

cell migration in a calcium and PKC-dependent manner. May be involved in hearing.

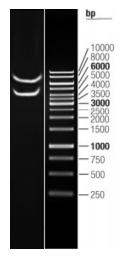

[UniProtKB/Swiss-Prot Function]
