	Dpy30 (NM_001146223) Mouse Tagged ORF Clone Lentiviral Particle – MR218030L3V
Gene Summary:	As part of the MLL1/MLL complex, involved in the methylation of histone H3 at 'Lys-4', particularly trimethylation. Histone H3 'Lys-4' methylation represents a specific tag for
	epigenetic transcriptional activation. May play some role in histone H3 acetylation. In embryonic stem (ES) cells, plays a crucial role in the differentiation potential, particularly
	along the neural lineage, regulating gene induction and histone H3 'Lys-4' methylation at key
	developmental loci, including that mediated by retinoic acid. Does not affect ES cell self- renewal. May also play an indirect or direct role in endosomal transport.[UniProtKB/Swiss-

Prot Function]
