Abcb11 (NM_021022) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Abcb11 (NM_021022) Mouse Tagged ORF Clone Lentiviral Particle

Symbol: Abcb11

Synonyms: ABC1; ABC16; Bs; Bsep; Lit; Lith1; PFI; PFIC2; PGY; PGY4; SPGP

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

 Tag:
 Myc-DDK

 ACCN:
 NM_021022

ORF Size: 3963 bp

ORF Nucleotide Sequence:

The ORF insert of this clone is exactly the same as(MR218267).

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 021022.3</u>, <u>NP 066302.2</u>

 RefSeq Size:
 4899 bp

 RefSeq ORF:
 3966 bp

 Locus ID:
 27413

 UniProt ID:
 Q9QY30

 Cytogenetics:
 2 39.69 cM

Gene Summary:

The membrane-associated protein encoded by this gene is a member of the superfamily of ATP-binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the MDR/TAP subfamily. Members of the MDR/TAP subfamily are involved in multidrug resistance. The protein encoded by this gene is the major canalicular bile salt transporter in humans and mice. Mutations in the human gene cause a form of progressive familial intrahepatic cholestases which are a group of inherited disorders with severe cholestatic liver disease from early infancy. [provided by RefSeq, Jul 2008]
