Gene Summary:Serine/threonine-protein kinase component of the chromosomal passenger complex (CPC), a
complex that acts as a key regulator of mitosis. The CPC complex has essential functions at
the centromere in ensuring correct chromosome alignment and segregation and is required
for chromatin-induced microtubule stabilization and spindle assembly. Plays also a role in
meiosis and more particularly in spermatogenesis. Has redundant cellular functions with
AURKB and can rescue an AURKB knockdown. Like AURKB, AURKC phosphorylates histone H3
at 'Ser-10' and 'Ser-28'. AURKC phosphorylates the CPC complex subunits BIRC5/survivin and
INCENP leading to increased AURKC activity. Phosphorylates TACC1, another protein involved
in cell division, at 'Ser-228'.[UniProtKB/Swiss-Prot Function]
