## Product datasheet for MR219383L4

## Morf4I2 (NM_019768) Mouse Tagged Lenti ORF Clone

## Product data:

Product Type: Expression Plasmids
Product Name: Morf4I2 (NM_019768) Mouse Tagged Lenti ORF Clone

Tag:
Symbol:
mGFP
Morf4l2
2410017O14Rik; mKIAA0026; Mrgx; Sid393p
Puromycin
Mammalian Cell
Selection:
Vector:
E. coli Selection:

ORF Nucleotide
Sequence:
Restriction Sites:
Cloning Scheme:
pLenti-C-mGFP-P2A-Puro (PS100093)
Chloramphenicol ( $34 \mathrm{ug} / \mathrm{mL}$ )
The ORF insert of this clone is exactly the same as(MR219383).

Sgfl-Mlul

Cloning sites used for ORF Shuttling:

----- GGA CTC AGA GTT TGG GTA GGA AGC

* The last codon before the Stop codon of the ORF.

## Plasmid Map:

## ACCN:

ORF Size:
OTI Disclaimer:

| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression <br> varies depending on the nature of the gene. |
| :--- | :--- |
| Components: | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube <br> containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water). |
| Reconstitution Method: | 1. Centrifuge at $5,000 \times \mathrm{g}$ for 5 min. <br> 2. Carefully open the tube and add 100 ul of sterile water to dissolve the DNA. <br> 3. Close the tube and incubate for 10 minutes at room temperature. <br> 4. Briefly vortex the tube and then do a quick spin (less than 5000 xg ) to concentrate the liquid <br> at the bottom. <br> 5. Store the suspended plasmid at $-20^{\circ} \mathrm{C}$. The DNA is stable for at least one year from date of <br> shipping when stored at $-20^{\circ} \mathrm{C}$. |
| RefSeq: | NM 019768.4 |
| RefSeq Size: | 1954 bp <br> RefSeq ORF: |

| Locus ID: | 56397 <br> UniProt ID: <br> Cytogenetics: |
| :--- | :--- |
| Gene Summary: | X F1 |
|  | Component of the NuA4 histone acetyltransferase complex which is involved in <br> transcriptional activation of select genes principally by acetylation of nucleosomal histone H4 <br> and H2A. This modification may both alter nucleosome - DNA interactions and promote <br> interaction of the modified histones with other proteins which positively regulate |
| transcription. This complex may be required for the activation of transcriptional programs |  |
| associated with oncogene and proto-oncogene mediated growth induction, tumor suppressor |  |
| mediated growth arrest and replicative senescence, apoptosis, and DNA repair. The NuA4 |  |
| complex ATPase and helicase activities seem to be, at least in part, contributed by the |  |
| association of RUVBL1 and RUVBL2 with EP400. NuA4 may also play a direct role in DNA |  |
| repair when directly recruited to sites of DNA damage. Also component of the MSIN3A |  |
| complex which acts to repress transcription by deacetylation of nucleosomal histones (By |  |
| similarity).[UniProtKB/Swiss-Prot Function] |  |
