OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression
	varies depending on the nature of the gene.

Gene Summary:Has calcium-dependent phospholipid scramblase activity; scrambles phosphatidylcholine and
galactosylceramide (PubMed:23532839). Does not exhibit calcium-activated chloride channel
(CaCC) activity (PubMed:23532839). Seems to act as potassium channel regulator and may
inhibit pain signaling; can facilitate KCNT1/Slack channel activity by promoting its full single-
channel conductance at very low sodium concentrations and by increasing its sodium
sensitivity (PubMed:23872594).[UniProtKB/Swiss-Prot Function]
