## Atxn7l3 (NM\_001098836) Mouse Tagged Lenti ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

Product Name: Atxn7l3 (NM\_001098836) Mouse Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: Atxn7l3

Synonyms: E030022H21Rik

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(MR220280).

Sequence:

quence.

Sgfl-Mlul

Restriction Sites: Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM\_001098836

ORF Size: 1062 bp

#### Atxn7l3 (NM\_001098836) Mouse Tagged Lenti ORF Clone - MR220280L3

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001098836.1</u>, <u>NP 001092306.1</u>

RefSeq Size: 3723 bp
RefSeq ORF: 1065 bp
Locus ID: 217218
UniProt ID: A2AWT3
Cytogenetics: 11 D

**Gene Summary:** Component of the transcription regulatory histone acetylation (HAT) complex SAGA, a

multiprotein complex that activates transcription by remodeling chromatin and mediating

histone acetylation and deubiquitination. Within the SAGA complex, participates in a

subcomplex that specifically deubiquitinates both histones H2A and H2B. The SAGA complex is recruited to specific gene promoters by activators such as MYC, where it is required for transcription. Required for nuclear receptor-mediated transactivation. Within the complex, it

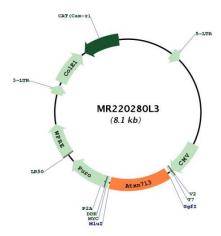

is required to recruit USP22 and ENY2 into the SAGA complex. Regulates H2B

monoubiquitination (H2Bub1) levels. Affects subcellular distribution of ENY2, USP22 and

ATXN7L3B.[UniProtKB/Swiss-Prot Function]
