## Cmah (NM\_007717) Mouse Tagged Lenti ORF Clone - MR221847L4

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Cytogenetics:

**Gene Summary:** Sialic acids are components of carbohydrate chains of glycoconjugates and are involved in

cell-cell recognition and cell-pathogen interactions. Catalyzes the conversion of CMP-N-

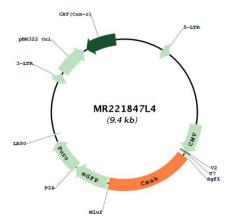

acetylneuraminic acid (CMP-Neu5Ac) into its hydroxylated derivative CMP-N-

glycolylneuraminic acid (CMP-Neu5Gc), a sialic acid abundantly expressed at the surface of

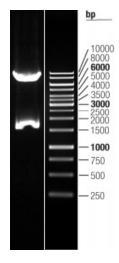

many cells.[UniProtKB/Swiss-Prot Function]
