

# Product datasheet for MR221903L4

## Lemd3 (NM\_001081193) Mouse Tagged Lenti ORF Clone

### **Product data:**

#### **Product Type: Expression Plasmids Product Name:** Lemd3 (NM\_001081193) Mouse Tagged Lenti ORF Clone Tag: mGFP Symbol: Lemd3 Al316861; Man1 Synonyms: **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-mGFP-P2A-Puro (PS100093) E. coli Selection: Chloramphenicol (34 ug/mL) The ORF insert of this clone is exactly the same as(MR221903). **ORF** Nucleotide Sequence: **Restriction Sites:** Sgfl-Mlul **Cloning Scheme:** Cloning sites used for ORF Shuttling: ORF Sqf I Mlu I --- GCG ATC GC C ATG --- //--- NNN ACG CGT ---

ACCN: ORF Size: NM\_001081193 2754 bp

| <b>ORIGENE</b> Lemd3   | (NM_001081193) Mouse Tagged Lenti ORF Clone – MR221903L4                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OTI Disclaimer:        | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>                                  |
| OTI Annotation:        | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.                                                                                                                                                                                                                                                                                                                                       |
| Components:            | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).                                                                                                                                                                                                                                                                                       |
| Reconstitution Method: | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol> |
| RefSeq:                | <u>NM 001081193.2</u> , <u>NP 001074662.2</u>                                                                                                                                                                                                                                                                                                                                                                                                                              |
| RefSeq Size:           | 4754 bp                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| RefSeq ORF:            | 2757 bp                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Locus ID:              | 380664                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Cytogenetics:          | 10 D2                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Gene Summary:          | Can function as a specific repressor of TGF-beta, activin, and BMP signaling through its interaction with the R-SMAD proteins. Antagonizes TGF-beta-induced cell proliferation arrest (By similarity).[UniProtKB/Swiss-Prot Function]                                                                                                                                                                                                                                      |
