Gene Summary:This gene encodes a secreted protein that belongs to the class 3 semaphorin/collapsin family.
Members of this family play a role in growth cone guidance during neurogenesis. The
encoded protein inhibits axonal extension. This protein is thought to be an osteoblast protein
that regulates bone mass and affects skeletal homeostasis. A similar gene in humans
functions as a tumor suppressor gene. Alternative splicing results in multiple transcript
variants. [provided by RefSeq, Apr 2014]
