

## Product datasheet for MR222967L3V

## Gdf3 (NM\_008108) Mouse Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	Gdf3 (NM_008108) Mouse Tagged ORF Clone Lentiviral Particle
Symbol:	Gdf3
Synonyms:	C78318; ecat; ecat9; Gdf-3; Vg; Vgr; Vgr-2; Vgr2
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_008108
ORF Size:	1101 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR222967).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 008108.4</u>
RefSeq Size:	2109 bp
RefSeq ORF:	1101 bp
Locus ID:	14562
UniProt ID:	<u>Q07104</u>
Cytogenetics:	6 57.7 cM

Gene Summary:This gene encodes a secreted ligand of the TGF-beta (transforming growth factor-beta)<br/>superfamily of proteins. Ligands of this family bind various TGF-beta receptors leading to<br/>recruitment and activation of SMAD family transcription factors that regulate gene<br/>expression. The encoded preproprotein is proteolytically processed to generate each subunit<br/>of the disulfide-linked homodimer. This protein is important in embryogenesis and likely<br/>plays a role ocular and skeletal development. Mice lacking a functional copy of this gene<br/>exhibit defects in early embryonic development resulting in embryonic lethality. [provided by<br/>RefSeq, Aug 2016]
