Gene Summary:Tyrosine-protein kinase that acts as cell-surface receptor for the cytokine FLT3LG and
regulates differentiation, proliferation and survival of hematopoietic progenitor cells and of
dendritic cells. Promotes phosphorylation of SHC1 and AKT1, and activation of the
downstream effector MTOR. Promotes activation of RAS signaling and phosphorylation of
downstream kinases, including MAPK1/ERK2 and/or MAPK3/ERK1. Promotes phosphorylation
of FES, FER, PTPN6/SHP, PTPN11/SHP-2, PLCG1, and STAT5A and/or STAT5B. Activation of
wild-type FLT3 causes only marginal activation of STAT5A or STAT5B. Mutations that cause
constitutive kinase activity promote cell proliferation and resistance to apoptosis via the
activation of multiple signaling pathways.[UniProtKB/Swiss-Prot Function]
