Product datasheet for MR223645L3V

Mmp8 (NM_008611) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	Mmp8 (NM_008611) Mouse Tagged ORF Clone Lentiviral Particle
Symbol:	Mmp8
Synonyms:	BB138268
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_008611
ORF Size:	1395 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR223645).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 008611.4, NP 032637.3</u>
RefSeq Size:	2453 bp
RefSeq ORF:	1398 bp
Locus ID:	17394
UniProt ID:	<u>070138</u>
Cytogenetics:	9 A1

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:This gene encodes a member of the matrix metalloproteinase family of extracellular matrix-
degrading enzymes that are involved in tissue remodeling, wound repair, progression of
atherosclerosis and tumor invasion. The encoded preproprotein undergoes proteolytic
processing to generate a mature, zinc-dependent endopeptidase enzyme that degrades types
I, II and III collagens. Mice lacking the encoded protein exhibit abnormalities in the
inflammatory responses to various agents. This gene is located in a cluster of other matrix
metalloproteinase genes on chromosome 9. [provided by RefSeq, Feb 2016]
