## Product datasheet for MR224371L3V

## Crem (NM\_001110859) Mouse Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	Crem (NM_001110859) Mouse Tagged ORF Clone Lentiviral Particle
Symbol:	Crem
Synonyms:	IC; ICER; ICERI
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_001110859
ORF Size:	1071 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR224371).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001110859.2</u> , <u>NP 001104329.1</u>
RefSeq Size:	2572 bp
RefSeq ORF:	1074 bp
Locus ID:	12916
UniProt ID:	<u>P27699</u>
Cytogenetics:	18 A1

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:This gene encodes a basic-leucine zipper domain-containing protein that localizes to gene<br/>promoters, where it binds to the cyclic AMP response element (CRE). Different protein<br/>isoforms encoded by this gene may function as either activators or repressors of<br/>transcription. Activity of this gene is important in multiple developmental processes, including<br/>spermatogenesis. Mutation of this gene causes male infertility. Alternative splicing and<br/>promoter usage result in multiple transcript variants for this gene. [provided by RefSeq, Oct<br/>2012]
