Gene Summary:Sodium-dependent, high-affinity amino acid transporter that mediates the uptake of L-
glutamate and also L-aspartate and D-aspartate (PubMed:9379843). Functions as a
symporter that transports one amino acid molecule together with two or three Na(+) ions
and one proton, in parallel with the counter-transport of one K(+) ion. Mediates Cl(-) flux that
is not coupled to amino acid transport; this avoids the accumulation of negative charges due
to aspartate and Na(+) symport (By similarity). Plays a redundant role in the rapid removal of
released glutamate from the synaptic cleft, which is essential for terminating the postsynaptic
action of glutamate (Probable).[UniProtKB/Swiss-Prot Function]
