Ldb1 (NM_001113408) Mouse Tagged ORF Clone Lentiviral Particle - MR225015L4V Gene Summary: Binds to the LIM domain of a wide variety of LIM domain-containing transcription factors. May regulate the transcriptional activity of LIM-containing proteins by determining specific partner interactions. Plays a role in the development of interneurons and motor neurons in cooperation with LHX3 and ISL1. Acts synergistically with LHX1/LIM1 in axis formation and

activation of gene expression. Acts with LMO2 in the regulation of red blood cell

development, maintaining erythroid precursors in an immature state.[UniProtKB/Swiss-Prot

Function]
