

Product datasheet for MR225278

Adcy5 (NM_001012765) Mouse Tagged ORF Clone

Product data:

Product Type: Expression Plasmids
Product Name: Adcy5 (NM_001012765) Mouse Tagged ORF Clone
Tag: Myc-DDK
Symbol: Adcy5
Synonyms: Ac5; AW121902
Mammalian Cell Selection: Neomycin
Vector: pCMV6-Entry (PS100001)
E. coli Selection: Kanamycin (25 ug/mL)
ORF Nucleotide Sequence: >MR225278 representing NM_001012765
 Red=Cloning site Blue=ORF Green=Tags(s)

TRTRPLEQKLISEEDLAANDILDYKDDDDK V

Chromatograms: https://cdn.origene.com/chromatograms/mm9001_e10.zip

Restriction Sites: RsrII-MluI

Cloning Scheme:

ACCN: NM_001012765

ORF Size: 3786 bp

OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none"> 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_001012765.5
RefSeq Size:	5060 bp
RefSeq ORF:	3789 bp
Locus ID:	224129
UniProt ID:	P84309
Cytogenetics:	16 B3
MW:	139.6 kDa
Gene Summary:	Catalyzes the formation of the signaling molecule cAMP in response to G-protein signaling. Mediates signaling downstream of ADRB1. Regulates the increase of free cytosolic Ca(2+) in response to increased blood glucose levels and contributes to the regulation of Ca(2+)-dependent insulin secretion.[UniProtKB/Swiss-Prot Function]
