

# Product datasheet for MR225392L2

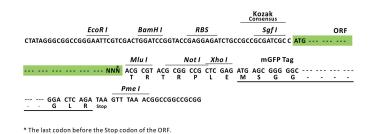

# Mertk (NM\_008587) Mouse Tagged Lenti ORF Clone

### **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	Mertk (NM_008587) Mouse Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	Mertk
Synonyms:	Eyk; Mer; nmf12; Nyk
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR225392).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I ORF Miu I GCG ATC GC <mark>ATG // NNŇ</mark> ACG CGT

ACCN: ORF Size: NM\_008587 2982 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	/lertk (NM_008587) Mouse Tagged Lenti ORF Clone – MR225392L2
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	<ul> <li>thod: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 008587.1</u>
RefSeq Size:	3564 bp
RefSeq ORF:	2985 bp
Locus ID:	17289
UniProt ID:	<u>Q60805</u>
Cytogenetics:	2 F1

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### Mertk (NM\_008587) Mouse Tagged Lenti ORF Clone – MR225392L2

Gene Summary:Receptor tyrosine kinase that transduces signals from the extracellular matrix into the<br/>cytoplasm by binding to several ligands including LGALS3, TUB, TULP1 or GAS6. Regulates<br/>many physiological processes including cell survival, migration, differentiation, and<br/>phagocytosis of apoptotic cells (efferocytosis). Ligand binding at the cell surface induces<br/>autophosphorylation of MERTK on its intracellular domain that provides docking sites for<br/>downstream signaling molecules. Following activation by ligand, interacts with GRB2 or<br/>PLCG2 and induces phosphorylation of MAPK1, MAPK2, FAK/PTK2 or RAC1. MERTK signaling<br/>plays a role in various processes such as macrophage clearance of apoptotic cells, platelet<br/>aggregation, cytoskeleton reorganization and engulfment. Functions in the retinal pigment<br/>epithelium (RPE) as a regulator of rod outer segments fragments phagocytosis. Plays also an<br/>important role in inhibition of Toll-like receptors (TLRs)-mediated innate immune response by<br/>activating STAT1, which selectively induces production of suppressors of cytokine signaling<br/>SOCS1 and SOCS3.[UniProtKB/Swiss-Prot Function]
