OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of
	reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>

Gene Summary:Polyglutamase which preferentially modifies alpha-tubulin (PubMed:17499049). Involved in
the side-chain elongation step of the polyglutamylation reaction rather than in the initiation
step. Required for CCSAP localization to both spindle and cilia microtubules
(PubMed:17499049). Generates long side-chains (PubMed:20530212).[UniProtKB/Swiss-Prot
Function]
