| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |

Gene Summary:Mediates the exchange of one Ca(2+) ion against three to four Na(+) ions across the cell<br/>membrane, and thereby contributes to the regulation of cytoplasmic Ca(2+) levels and Ca(2+)-<br/>dependent cellular processes (PubMed:8659820). Contributes to Ca(2+) transport during<br/>excitation-contraction coupling in muscle. In a first phase, voltage-gated channels mediate the<br/>rapid increase of cytoplasmic Ca(2+) levels due to release of Ca(2+) stores from the<br/>endoplasmic reticulum. SLC8A1 mediates the export of Ca(2+) from the cell during the next<br/>phase, so that cytoplasmic Ca(2+) levels rapidly return to baseline (PubMed:10967099).<br/>Required for normal embryonic heart development and the onset of heart contractions<br/>(PubMed:10967099).[UniProtKB/Swiss-Prot Function]
