SCRIGENE Ufl1 (NM_02619

Ufl1 (NM_026194) Mouse Tagged ORF Clone Lentiviral Particle – MR225944L3V

Gene Summary:E3 protein ligase that mediates ufmylation, the covalent attachment of the ubiquitin-like
modifier UFM1 to substrate proteins, a post-translational modification on lysine residues of
proteins that may play a crucial role in a number of cellular processes. Mediates DDRGK1
ufmylation and may regulate the proteasomal degradation of DDRGK1 and CDK5RAP3
thereby modulating NF-kappa-B signaling. May also play a role in nuclear receptor-mediated
transcription through TRIP4 ufmylation. May play a role in the unfolded protein response,
mediating the ufmylation of multiple proteins in response to endoplasmic reticulum stress.
Anchors CDK5RAP3 in the cytoplasm, preventing its translocation to the nucleus which allows
expression of the CCND1 cyclin and progression of cells through the G1/S transition.
[UniProtKB/Swiss-Prot Function]
