

# Product datasheet for MR226390L3

# Apobec3 (NM\_001160415) Mouse Tagged Lenti ORF Clone

### **Product data:**

| Product Type:                | Expression Plasmids   |
|------------------------------|---|
| Product Name:                | Apobec3 (NM_001160415) Mouse Tagged Lenti ORF Clone                                     |
| Tag:                         | Myc-DDK   |
| Symbol:                      | Apobec3   |
| Synonyms:                    | Apobec; Arp3; BC003314; Cem15; Rfv3   |
| Mammalian Cell<br>Selection: | Puromycin   |
| Vector:                      | pLenti-C-Myc-DDK-P2A-Puro (PS100092)  |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)  |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(MR226390).                          |
| <b>Restriction Sites:</b>    | Sgfl-Mlul   |
| Cloning Scheme:              |   |
|                              | Cloning sites used for ORF Shuttling:   |
|                              | Sgf I         ORF         Miu I           GCG ATC GC         ATG // NNÑ         ACG CGT |

ACCN: NM\_001160415 ORF Size: 1287 bp

|                       | ec3 (NM_001160415) Mouse Tagged Lenti ORF Clone – MR226390L3  |
|-----------------------|---|
| OTI Disclaimer:       | Due to the inherent nature of this plasmid, standard methods to replicate additional amounts<br>of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore,<br>OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts<br>of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a<br>reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by<br>calling 301.340.3188 option 3 for pricing and delivery.                  |
|                       | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:       | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:           | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method | <ol> <li>1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>   |
| RefSeq:               | <u>NM 001160415.1, NP 001153887.1</u>   |
| RefSeq Size:          | 2459 bp   |
| RefSeq ORF:           | 1290 bp   |
| Locus ID:             | 80287   |
| Cytogenetics:         | 15 37.85 cM   |
| Gene Summary:         | DNA deaminase (cytidine deaminase) which acts as an inhibitor of retrovirus replication and<br>retrotransposon mobility via deaminase-dependent and -independent mechanisms.<br>Selectively targets single-stranded DNA and does not deaminate double-stranded DNA or<br>single-or double-stranded RNA. Exhibits antiviral activity against HIV-1, simian<br>immunodeficiency viruses (SIVs), mouse mammary tumor virus (MMTV) and friend murine<br>leukemia virus (FrMLV) and may inhibit the mobility of LTR retrotransposons.<br>[UniProtKB/Swiss-Prot Function] |
