Gene Summary:ATP-dependent RNA helicase which is a subunit of the eIF4F complex involved in cap<br/>recognition and is required for mRNA binding to ribosome. In the current model of<br/>translation initiation, eIF4A unwinds RNA secondary structures in the 5'-UTR of mRNAs which<br/>is necessary to allow efficient binding of the small ribosomal subunit, and subsequent<br/>scanning for the initiator codon.[UniProtKB/Swiss-Prot Function]
