Gene Summary:Key component of innate and adaptive immunity. TLRs (Toll-like receptors) control host<br/>immune response against pathogens through recognition of molecular patterns specific to<br/>microorganisms. TLR9 is a nucleotide-sensing TLR which is activated by unmethylated<br/>cytidine-phosphate-guanosine (CpG) dinucleotides. Acts via MYD88 and TRAF6, leading to NF-<br/>kappa-B activation, cytokine secretion and the inflammatory response (PubMed:18931679,<br/>PubMed:21402738, PubMed:14993594, PubMed:17474149, PubMed:25686612,<br/>PubMed:18820679). Plays a role in defense against systemic mouse cytomegalovirus<br/>infection (PubMed:14993594). Controls lymphocyte response to Helicobacter infection<br/>(PubMed:17474149). Upon CpG stimulation, induces B-cell proliferation, activation, survival<br/>and antibody production (By similarity).[UniProtKB/Swiss-Prot Function]
