

Product datasheet for MR227101L4V

Kl (NM_013823) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles Product Name: KI (NM 013823) Mouse Tagged ORF Clone Lentiviral Particle Symbol: Κl alpha-kl Synonyms: **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-mGFP-P2A-Puro (PS100093) mGFP Tag: NM 013823 ACCN: ORF Size: 3045 bp The ORF insert of this clone is exactly the same as(MR227101). **ORF** Nucleotide Sequence: **OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info **OTI** Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. **RefSeq:** NM 013823.2, NP 038851.2 **RefSeq Size:** 5124 bp **RefSeq ORF:** 3045 bp Locus ID: 16591 **UniProt ID:** 035082 Cytogenetics: 5 G3

Gene Summary:May have weak glycosidase activity towards glucuronylated steroids. However, it lacks
essential active site Glu residues at positions 241 and 874, suggesting it may be inactive as a
glycosidase in vivo. May be involved in the regulation of calcium and phosphorus
homeostasis by inhibiting the synthesis of active vitamin D. Essential factor for the specific
interaction between FGF23 and FGFR1.[UniProtKB/Swiss-Prot Function]
