Gene Summary:Sonic hedgehog protein: The C-terminal part of the sonic hedgehog protein precursor
displays an autoproteolysis and a cholesterol transferase activity (PubMed:8824192,
PubMed:7891723). Both activities result in the cleavage of the full-length protein into two
parts (ShhN and ShhC) followed by the covalent attachment of a cholesterol moiety to the C-
terminal of the newly generated ShhN (PubMed:8824192). Both activities occur in the
reticulum endoplasmic (PubMed:21357747). Once cleaved, ShhC is degraded in the
endoplasmic reticulum (PubMed:21357747).[UniProtKB/Swiss-Prot Function]
