

Product datasheet for MR227309L4V

Kcnj6 (NM_010606) Mouse Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	Kcnj6 (NM_010606) Mouse Tagged ORF Clone Lentiviral Particle
Symbol:	Кспјб
Synonyms:	BIR1; GIRK2; KATP2; KCNJ7; Kir3.2; weaver; wv
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_010606
ORF Size:	1275 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(MR227309).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 010606.2, NP 034736.2</u>
RefSeq Size:	3086 bp
RefSeq ORF:	1278 bp
Locus ID:	16522
UniProt ID:	<u>P48542</u>
Cytogenetics:	16 55.44 cM

Gene Summary:This potassium channel is controlled by G proteins. It plays a role in granule cell
differentiation, possibly via membrane hyperpolarization. Inward rectifier potassium
channels are characterized by a greater tendency to allow potassium to flow into the cell
rather than out of it. Their voltage dependence is regulated by the concentration of
extracellular potassium; as external potassium is raised, the voltage range of the channel
opening shifts to more positive voltages. The inward rectification is mainly due to the
blockage of outward current by internal magnesium.[UniProtKB/Swiss-Prot Function]
