Gene Summary:The protein encoded by this gene catalyzes the conversion of L-lactate and NAD to pyruvate<br/>and NADH in the final step of anaerobic glycolysis. The protein is found predominantly in<br/>muscle tissue and belongs to the lactate dehydrogenase family. Mutations in this gene have<br/>been linked to hemolytic anemia and early postimplantation death in mice. Multiple<br/>transcript variants encoding different isoforms have been found for this gene. The mouse<br/>genome contains multiple pseudogenes of this gene. [provided by RefSeq, May 2013]
