

Product datasheet for MR228531

Gdnf (NM_001301357) Mouse Tagged ORF Clone

Product data:

E. coli Selection:

Product Type: Expression Plasmids

Product Name: Gdnf (NM_001301357) Mouse Tagged ORF Clone

Kanamycin (25 ug/mL)

Tag: Myc-DDK

Symbol: Gdnf

Synonyms: Al385739; ATF

Vector: pCMV6-Entry (PS100001)

Cell Selection: Neomycin

ORF Nucleotide >MR228531 representing NM_001301357
Sequence: Red=Cloning site Blue=ORF Green=Tags(s)

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Restriction Sites:

Sgfl-Mlul

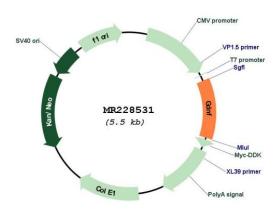

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

Plasmid Map:

ACCN: NM_001301357

ORF Size: 633 bp

Gdnf (NM_001301357) Mouse Tagged ORF Clone - MR228531

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001301357.1</u>, <u>NP 001288286.1</u>

 RefSeq Size:
 3449 bp

 RefSeq ORF:
 636 bp

 Locus ID:
 14573

 UniProt ID:
 P48540

Cytogenetics: 15 A1

MW: 24.1 kDa

Gene Summary: This gene encodes a secreted ligand of the TGF-beta (transforming growth factor-beta)

superfamily of proteins. Ligands of this family bind various TGF-beta receptors leading to

recruitment and activation of SMAD family transcription factors that regulate gene

expression. The encoded preproprotein is proteolytically processed to generate each subunit of the disulfide-linked homodimer. The recombinant form of this protein, a highly conserved neurotrophic factor, was shown to promote the survival and differentiation of dopaminergic neurons in culture, and was able to prevent apoptosis of motor neurons induced by axotomy.

This protein is a ligand for the product of the RET (rearranged during transfection) protooncogene. Homozygous knockout mice for this gene exhibit defects in kidney development and neonatal death. This gene encodes multiple protein isoforms that may

undergo similar proteolytic processing. [provided by RefSeq, Aug 2016]
