

Product datasheet for MR231753

Pex1 (NM_001293806) Mouse Tagged ORF Clone

Product data:

Product Type: Expression Plasmids
Product Name: Pex1 (NM_001293806) Mouse Tagged ORF Clone
Tag: Myc-DDK
Symbol: Pex1
Synonyms: 5430414H02Rik; E330005K07Rik; ZWS1
Vector: pCMV6-Entry (PS100001)
E. coli Selection: Kanamycin (25 ug/mL)
Cell Selection: Neomycin
ORF Nucleotide Sequence: >MR231753 representing NM_001293806
 Red=Cloning site Blue=ORF Green=Tags(s)

Plasmid Map:

ACCN: NM_001293806

ORF Size: 3852 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. [More info](#)

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_001293806.1](#), [NP_001280735.1](#)

RefSeq Size: 4553 bp

RefSeq ORF: 3855 bp

Locus ID: 71382

UniProt ID: [Q5BL07](#)

Cytogenetics: 5 A1

MW: 141.9 kDa

Gene Summary: Required for stability of PEX5 and protein import into the peroxisome matrix. Anchored by PEX26 to peroxisome membranes, possibly to form heteromeric AAA ATPase complexes required for the import of proteins into peroxisomes (By similarity).[UniProtKB/Swiss-Prot Function]
