	KAT5 (NM_182709) Human Mass Spec Standard – PH310591
Locus ID:	10524
UniProt ID:	<u>Q92993</u> , <u>A0A024R5E8</u>
Cytogenetics:	11q13.1
Summary:	The protein encoded by this gene belongs to the MYST family of histone acetyl transferases (HATs) and was originally isolated as an HIV-1 TAT-interactive protein. HATs play important roles in regulating chromatin remodeling, transcription and other nuclear processes by acetylating histone and nonhistone proteins. This protein is a histone acetylase that has a role in DNA repair and apoptosis and is thought to play an important role in signal transduction. Alternative splicing of this gene results in multiple transcript variants. [provided by RefSeq, Jul 2008]
