Cytogenetics: 1p36.11

Summary: This gene belongs to the stathmin family of genes. It encodes a ubiquitous cytosolic

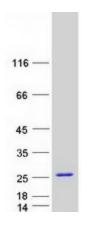

phosphoprotein proposed to function as an intracellular relay integrating regulatory signals

of the cellular environment. The encoded protein is involved in the regulation of the microtubule filament system by destabilizing microtubules. It prevents assembly and promotes disassembly of microtubules. Multiple transcript variants encoding different

isoforms have been found for this gene. [provided by RefSeq, Feb 2009]

**Protein Pathways:** MAPK signaling pathway
