#### REG3A (NM\_138937) Human Mass Spec Standard - PH316966

**Cytogenetics:** 2p12

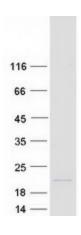

Summary: This gene encodes a pancreatic secretory protein that may be involved in cell proliferation or

differentiation. It has similarity to the C-type lectin superfamily. The enhanced expression of this gene is observed during pancreatic inflammation and liver carcinogenesis. The mature protein also functions as an antimicrobial protein with antibacterial activity. Alternate splicing results in multiple transcript variants that encode the same protein.
