## Band 3 (SLC4A1) (NM\_000342) Human Mass Spec Standard

**Product data:** 

**Product Type:** Mass Spec Standards

**Description:** SLC4A1 MS Standard C13 and N15-labeled recombinant protein (NP\_000333)

Species: Human
Expression Host: HEK293

Expression cDNA Clone

e RC218312

or AA Sequence:

Predicted MW:

101.6 kDa

Protein Sequence: >RC218312 representing NM\_000342

Red=Cloning site Green=Tags(s)

٧

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK

**Purity:** > 80% as determined by SDS-PAGE and Coomassie blue staining

Concentration:  $>0.05 \mu g/\mu L$  as determined by microplate BCA method

Labeling Method: Labeled with [U- 13C6, 15N4]-L-Arginine and [U- 13C6, 15N2]-L-Lysine

**Buffer:** 25 mM Tris-HCl, 100 mM glycine, pH 7.3

**Storage:** Store at -80°C. Avoid repeated freeze-thaw cycles.

**Stability:** Stable for 3 months from receipt of products under proper storage and handling conditions.

### Band 3 (SLC4A1) (NM\_000342) Human Mass Spec Standard - PH318312

**RefSeq:** NP 000333

RefSeq Size: 3637 RefSeq ORF: 2733

Synonyms: AE1; BND3; CD233; CHC; DI; EMPB3; EPB3; FR; RTA1A; SAO; SPH4; SW; WD; WD1; WR

 Locus ID:
 6521

 UniProt ID:
 P02730

 Cytogenetics:
 17q21.31

Summary: The protein encoded by this gene is part of the anion exchanger (AE) family and is expressed

in the erythrocyte plasma membrane, where it functions as a chloride/bicarbonate exchanger involved in carbon dioxide transport from tissues to lungs. The protein comprises two domains that are structurally and functionally distinct. The N-terminal 40kDa domain is located in the cytoplasm and acts as an attachment site for the red cell skeleton by binding

ankyrin. The glycosylated C-terminal membrane-associated domain contains 12-14 membrane spanning segments and carries out the stilbene disulphonate-sensitive exchange transport of anions. The cytoplasmic tail at the extreme C-terminus of the membrane domain binds carbonic anhydrase II. The encoded protein associates with the red cell membrane protein glycophorin A and this association promotes the correct folding and translocation of the exchanger. This protein is predominantly dimeric but forms tetramers in the presence of ankyrin. Many mutations in this gene are known in man, and these mutations can lead to two types of disease: destabilization of red cell membrane leading to hereditary spherocytosis, and defective kidney acid secretion leading to distal renal tubular acidosis. Other mutations that do not give rise to disease result in novel blood group antigens, which form the Diego blood group system. Southeast Asian ovalocytosis (SAO, Melanesian ovalocytosis) results from the heterozygous presence of a deletion in the encoded protein and is common in areas where Plasmodium falciparum malaria is endemic. One null mutation in this gene is known, resulting in very severe anemia and nephrocalcinosis. [provided by RefSeq, Jul 2008]

**Protein Families:** Druggable Genome, Transmembrane

# **Product images:**

Coomassie blue staining of purified SLC4A1 protein (Cat# [TP318312]). The protein was produced from HEK293T cells transfected with SLC4A1 cDNA clone (Cat# [RC218312]) using MegaTran 2.0 (Cat# [TT210002]).
