USF1 (NM_207005) Human Mass Spec Standard - PH319106

UniProt ID: P22415

Cytogenetics: 1q23.3

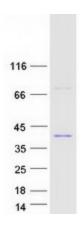

Summary: This gene encodes a member of the basic helix-loop-helix leucine zipper family, and can

function as a cellular transcription factor. The encoded protein can activate transcription through pyrimidine-rich initiator (Inr) elements and E-box motifs. This gene has been linked to familial combined hyperlipidemia (FCHL). Alternative splicing of this gene results in multiple transcript variants. A related pseudogene has been defined on chromosome 21. [provided by
