	NAP1L1 (NM_004537) Human Mass Spec Standard – PH320821
UniProt ID:	<u>P55209, A0A024RBB7, Q9H2B0</u>
Cytogenetics:	12q21.2
Summary:	This gene encodes a member of the nucleosome assembly protein (NAP) family. This protein participates in DNA replication and may play a role in modulating chromatin formation and contribute to the regulation of cell proliferation. Alternative splicing results in multiple transcript variants encoding different isoforms; however, not all have been fully described. [provided by RefSeq, Apr 2015]
