CHTF8 (NM_001040146) Human Mass Spec Standard – PH322808

Summary:This gene encodes a short protein that forms part of the Ctf18 replication factor C (RFC)
complex that occurs in both yeast and mammals. The heteroheptameric RFC complex plays a
role in sister chromatid cohesion and may load the replication clamp PCNA (proliferating cell
nuclear antigen) onto DNA during DNA replication and repair. This gene is ubiquitously
expressed and has been shown to have reduced expression in renal and prostate tumors.
Alternatively spliced transcript variants have been described. This gene has a pseudogene on
chromosome X. [provided by RefSeq, Oct 2018]
