RIPX (RUFY3) (NM_001130709) Human Mass Spec Standard - PH325870

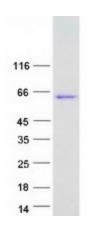

Locus ID: 22902 **UniProt ID:** Q7L099 Cytogenetics: 4q13.3

Summary: This gene encodes a RPIP8, UNC-14, and NESCA domain-containing protein that is required

for maintenance of neuronal polarity. In addition, it has been implicated in mediation of gastric cancer cell migration and invasion via interaction with P21-activated kinase-1, which promotes its expression. The encoded protein localizes to F-actin-enriched invadopodia to induce formation of protrusions, thereby facilitating cell migration. Alternative splicing results

in multiple transcript variants. [provided by RefSeq, Sep 2016]
