

Product datasheet for PP1035P2

IL15 Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies Applications: ELISA, FN, IHC, WB

Recommended Dilution: **Immunohistochemistry:** This antibody stained formalin-fixed, paraffin-embedded sections

> of human normal placenta. The recommended concentration is 0.5 µg/ml-1.0 µg/ml with a two hour incubation at room temperature. An HRP-labeled polymer detection system was used with a DAB chromogen. Heat induced antigen retrieval with a pH 6.0 sodium citrate

buffer is recommended.

Neutralization: To yield one-half maximal inhibition [ND50] of the biological activity of hlL-

15 (1.0 ng/ml), a concentration of 0.15 - 0.20 μ g/ml of this antibody is required.

Western blot: To detect hlL-15 by Western Blot analysis this antibody can be used at a concentration of 0.1 - 0.2 µg/ml. Used in conjunction with compatible secondary reagents the detection limit for recombinant hIL-15 is 1.5 - 3.0 ng/lane, under either reducing or non-

reducing conditions.

ELISA: To detect hIL-15 by direct ELISA (using 100µl/well antibody solution) a concentration of at least 0.5µg/ml of this antibody is required. This antigen affinity purified antibody, in conjunction with compatible secondary reagents, allows the detection of 0.2 - 0.4 ng/well of

recombinant hIL-15.

Reactivity: Human Host: Rabbit Clonality: Polyclonal

Immunogen: Highly pure (>98%) E.coli derived recombinant human Interleukin 15.

Specificity: This antibody reacts with human Interleukin-15.

Formulation: PBS, pH 7.2 without preservatives.

State: Aff - Purified

State: Lyophilized purified Ig fraction.

Restore in sterile water to a concentration of 0.1-1.0 mg/ml. **Reconstitution Method:**

Purification: Affinity chromatography.

Conjugation: Unconjugated

IL15 Rabbit Polyclonal Antibody - PP1035P2

Storage: Store lyophilized at 2-8°C for 6 months or at -20°C long term.

After reconstitution store the antibody undiluted at 2-8°C for one month or (in aliquots) at -

20°C long term.

Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Gene Name: interleukin 15

Database Link: Entrez Gene 3600 Human

P40933

Background: IL15 (114 amino acids) is a cytokine that regulates T and natural killer cell activation and

proliferation. It has a predicted molecular mass of approximately 12.5 kDa. Human IL15 shares approximately 97% and 73% amino acid sequence identity with simian and mouse IL15, respectively. Both human and simian IL15 are active on mouse cells. IL15 was initially isolated from the simian kidney epithelial cell line CV1/EBNA. It has also been isolated from mouse and human cell sources. The cytokines IL15 and IL2 share many biological properties and stimulatory activities (T, B, and NK cells). Both IL15 and IL2 stimulate mouse CTLL2 cells. In activated peripheral blood T lymphocytes, IL2 is highly expressed but the expression of IL15 is not detectable. There is no sequence homology between IL15 and IL2, though computer modeling indicates both possess a four alpha helical bundle structure. IL15 competes for binding sites with IL2, as both IL2 and IL15 stimulate the growth of cells through the IL2 receptor. IL15 mRNA is expressed in many cell types and tissues including adherent peripheral blood mononuclear cells, fibroblasts, and epithelial cells, monocytes, placenta, and skeletal muscle.

IL-15 (14-15 kD) is a member of the four alpha-helical bundle family of cytokines. It is very similar to IL-2, except that IL-15 has an IL-15 alpha receptor subunit. IL-15 plays an important

role in the growth and differentiation of T and B lymphocytes, natural killer cells,

macrophages, and monocytes as well as activation of a number of important intracellular signaling molecules. This implies that IL-15 could be essential for the immune responses,

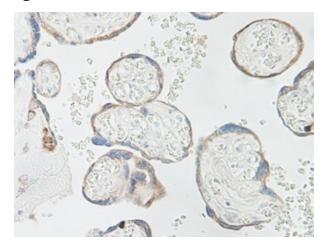

allograft rejection, and the pathogenesis of autoimmune diseases.

Synonyms: IL-15

Note: Centrifuge vial prior to opening!
