PDGF AA (PDGFA) (PDGF-AA) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: ELISA, WB

Recommended Dilution: Direct ELISA: To detect Human PDGF-AA by Direct ELISA (using 100 µl/well antibody solution)

this antibody can be used at a concentration of $\sim 1.0~\mu g/ml$. Used in conjunction with compatible secondary reagents, allows the detection of at least 0.2 ng/well of recombinant

Human PDGF-AA.

Sandwich ELISA: To detect Human PDGF-AA by Sandwich ELISA (using 100 μ l/well antibody solution), a concentration of 0.25-1.0 μ g/ml of this antibody is required, in conjunction with a purified anti-Human PDGF-AA (*Cat.-No* PP1061P) as a Capture antibody, allows the detection

of at least 0.2-0.4 ng/well of recombinant Human PDGF-AA.

Western Blot: To detect Human PDGF-AA by Western Blot analysis this antibody can be used at a concentration of 0.1-0.2 μ g/ml. When Used in conjunction with compatible secondary reagents the detection limit for recombinant Human PDGF-AA is 1.5-3.0 μ g/lane, under either

reducing or non-reducing conditions.

Reactivity: Human Rabbit

Clonality: Polyclonal

Immunogen: Highly pure (>98%) *E.coli* derived recombinant Human PDGF-AA (Cat.-No PA118)

Specificity: Human Platelet Derived Growth Factor AA (hPDGF-AA).

Formulation: PBS, pH 7.2 without preservatives

Label: Biotin

State: Lyophilized (sterile filtered) purified Ig fraction

Reconstitution Method: Restore in sterile PBS containing 0.1% BSA to a concentration of 0.1-1.0 mg/ml.

Purification: Affinity Chromatography

Conjugation: Biotin

Storage: Prior to reconstitution store at 2-8°C.

Following reconstitution store undiluted at 2-8°C for one month

or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.

PDGF AA (PDGFA) (PDGF-AA) Rabbit Polyclonal Antibody - PP1061B1

Stability: Shelf life: one year from despatch.

Gene Name: platelet derived growth factor subunit A

Database Link: Entrez Gene 5154 Human

P04085

Background: PDGFs are disulfide-linked dimers consisting of two 12.0-13.5 kDa polypeptide chains,

designated PDGF-A and PDGF-B chains. The three naturally occurring PDGFs; PDGF-AA, PDGF-BB and PDGF-AB, are potent mitogens for a variety of cell types including smooth muscle cells, connective tissue cells, bone and cartilage cells, and some blood cells. The PDGFs are stored in platelet alpha-granules and are released upon platelet activation. The PDGFs are involved in a number of biological processes, including hyperplasia, chemotaxis, embryonic

neuron development, and respiratory tubule epithelial cell development.

Two distinct signaling receptors used by PDGFs have been identified and named PDGFR-alpha and PDGFR-beta. PDGFRalpha is high-affinity receptor for each of the three PDGF forms. On the other hand, PDGFR-beta interacts with only PDGF-BB and PDGF-AB.

Synonyms: Platelet-derived growth factor subunit A, PDGF alpha, PDGF A, PDGF-A, Platelet-derived

growth factor alpha, PDGF subunit A, Platelet-derived growth factor A chain, PDGF1, PDGF-1

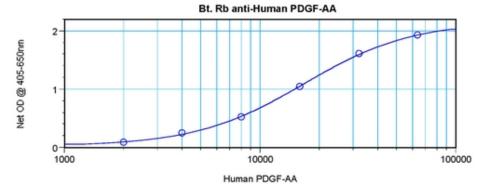

Note: Centrifuge vial prior to opening!

Protein Families: Druggable Genome

Protein Pathways: Cytokine-cytokine receptor interaction, Focal adhesion, Gap junction, Glioma, MAPK signaling

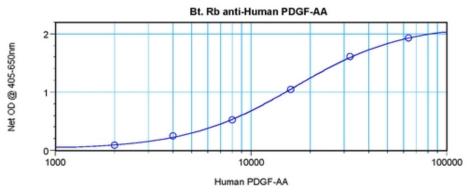

pathway, Melanoma, Pathways in cancer, Prostate cancer, Regulation of actin cytoskeleton
