| Product Type:          | Primary Antibodies  |
|------------------------|---|
| Applications:          | ELISA, WB   |
| Recommended Dilution:  | ELISA: Direct: To detect hsTNF-Receptor I (using 100 µl/well antibody solution) a concentration<br>of 0.25 - 1.0 µg/ml of this antibody is required. In conjunction with compatible secondary<br>reagents, it allows the detection of at least 0.2 - 0.4 ng/well of recombinant hsTNF-Receptor I.<br>Sandwich: To detect hsTNF-Receptor I (using 100 µl/well antibody solution) a concentration of<br>0.25 - 1.0 µg/ml of this antibody is required. This In conjunction with Polyclonal Anti-Human<br>sTNF-Receptor I as a capture antibody, it allows the detection of at least<br>0.2 - 0.4 ng/well of recombinant hsTNF-Receptor I.<br>Western blot: To detect hsTNF-Receptor I this antibody can be used at a concentration of<br>0.1 - 0.2 µg/ml. Used in conjunction with compatible secondary reagents the detection limit<br>for recombinant hsTNF-Receptor I is 1.5 - 3.0 ng/lane, under either reducing or non-reducing<br>conditions. |
| Reactivity:            | Human   |
| Host:                  | Rabbit  |
| Clonality:             | Polyclonal  |
| Immunogen:             | Highly pure (> 98 %) recombinant human sTNF-Receptor I  |
| Specificity:           | This antibody detects sTNF-Receptor I (CD120a).   |
| Formulation:           | PBS, pH 7.2<br>Label: Biotin<br>State: Sterile filtered lyophilized Ig fraction   |
| Reconstitution Method: | Centrifuge vial prior to opening. Restore in sterile PBS containing 0.1 % BSA to a concentration of 0.1 - 1.0 mg/ml.  |
| Purification:          | Affinity chromatograophy  |
| Conjugation:           | Biotin  |
| Storage:               | Store the lyophilized antibody at -20 °C. Following reconstitution it is stable for two weeks at 2 - 8 °C. Frozen aliquots are stable for 6 months when stored at -20 °C. Avoid repeated freezing and thawing.  |
| Stability:             | Shelf life: One year from despatch.   |

|                | TNFRSF1A Rabbit Polyclonal Antibody – PP1085B2   |
|----------------|--|
| Gene Name:     | tumor necrosis factor receptor superfamily member 1A   |
| Database Link: | Entrez Gene 7132 Human<br>P19438   |
| Background:    | Tumor Necrosis Factor (TNF) is a cytokine whose function is mediated through two distinct<br>cell surface receptors (TNF Receptor I and TNF Receptor II) that are included in the TNF<br>Receptor superfamily along with FAS antigen and CD40. TNF Receptors I and II are 55 and 75<br>kDa members, respectively, of a family of cell surface molecules including nerve growth<br>factor receptor, Fas/Apo1, CD30, OX40, and 41BB, which are characterized by cysteine rich<br>motifs in the extracellular domain. While TNF Receptor I and TNF Receptor II share 28%<br>sequence homology in the extracellular domains, their intracellular domains lack sequence<br>homology, suggesting that they differ in their internal signal transduction pathways.<br>TNF Receptor I contains an approximately 80 amino acid death domain near its carboxy<br>terminus capable of transmitting an apoptotic signal through its interaction with TRADD (TNF<br>Receptor I can also activate the transcription factor NFkB via TRAF2 (TNF Receptor associated<br>factor 2). The cytoplasmic domain of TNF Receptor I can directly interact with Jak kinase,<br>thereby activating the JAK/STAT signal transduction cascade.<br>TNF Receptor I is expressed by virtually all nucleated mammalian cells, including hepatocytes,<br>monocytes and neutrophils, cardiac muscle cells, endothelial cells, and CD34 + hematopoietic<br>progenitors. Both TNF alpha and TNF beta bind to TNF Receptor I. |
| Synonyms:      | Tumor necrosis factor receptor 1, TNF-R1, TNF-RI, TNFR-I, p55, p60, Tnfrsf1a   |
