

Product datasheet for PS100081

pLenti-C-Myc-DDK-IRES-Neo Lentiviral Gene Expression Vector

Product data:

Product Type: Lentiviral Gene Expression Vectors

C-Tag: Myc-DDK

E. coli Selection: Chloramphenicol (34 ug/mL)

Mammalian Cell Selection: Neomycin

- Features:
- This Lenti vector is a third generation of lentiviral vector.
 - All OriGene's TrueORF clone can be shuttled into this vector via PrecisionShuttling, a simple cut-and-ligation process.
 - The ORF cloned in this vector can be expressed as a tagged protein with c-terminal Myc-DDK tags.
 - IRES-Neo is within the Lentiviral packaging cassette and would allow Neomycin selection in both the transfected and the transduced cells.
 - A brief [lentiviral packaging protocol](#) is provided.
 - E. Coli* selection: Chloramphenicol(34ug/ml)
 - V2_F Primer (GE100111) can be used to sequence the target sequence after cloning.
 - WPRE_R Primer (GE100136) can be used to sequence the target sequence after cloning.
