Product datasheet for PS100085

pLenti-EF1a-C-Myc-DDK-IRES-Puro Lentiviral Gene Expression Vector

Product data:

Product Type: Lentiviral Gene Expression Vectors
C-Tag: Myc-DDK
E. coli Selection: Chloramphenicol (34 ug/mL)
Mammalian Cell Selection: Puromycin

Features:

- This Lenti vector is a third generation of lentiviral vector.
- All OriGene’s TrueORF clone can be shuttled into this vector via PrecisionShuttling, a simple cut-and-ligation process.
- The expression of the cloned ORF is driven by EF1a, a constitutive promoter as an alternative of CMV promoter. The latter could be silenced in certain cellular environment.
- The ORF cloned in this vector can be expressed as a tagged protein with c-terminal Myc-DDK tags.
- IRES-Puro is within the Lentiviral packaging cassette and would allow Puromycin selection in both the transfected and the transduced cells.
- A brief Lentiviral packaging protocol is provided
- EF51 Primer (GE100088) can be used to sequence the target sequence after cloning.
- IRES100 Primer (GE100121) can be used to sequence the target sequence after cloning.

Schematic of the multiple cloning sites:
