Product datasheet for PS100120

pLenti-EF1a-C-Myc-DDK-P2A-Puro Lentiviral Gene Expression Vector

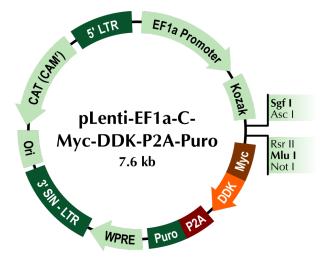

Product data:

Product Type:	Lentiviral Gene Expression Vectors										
C-Tag:	Myc-DDK										
E. coli Selection:	Chloramphenicol (34 ug/mL)										
Mammalian Cell Selection:	Puromycin										
•	This Lenti vector is a third generation lentiviral vector. The ORF cloned in this vector can be expressed as a tagged fusion protein with C-terminal Myc-DDK tag. The expression of the cloned ORF is driven by EF1a promoter, a constitutive promoter. P2A-Puro is within the Lentiviral packaging cassette and would allow puromycin selection in both the transfected and the transduced cells. A brief <u>lentiviral packaging protocol is provided</u> . <i>E. Coli.</i> selection: Chloramphenicol (34ug/ml) All OriGene's TrueORF clone can be shuttled into this vector via <u>PrecisionShuttling</u> , a simple cut-and-ligation process. EF51 Primer (GE100088) can be used to sequence the target sequence after cloning. P2A-DDK_R Primer (GE100128) can be used to sequence the target sequence after cloning.
