

Product datasheet for R1064FS

lacZ Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: IF, WB

Recommended Dilution: This product is designed for fluorescent Western blotting. This product is also suitable for

multiplex analysis, including multicolor imaging, utilizing various commercial platforms.

Recommended Dilutions: Western blot: 1/10,000.

IF microscopy: 1/500-1/2,500.

Reactivity: Escherichia coli

Host: Rabbit

Clonality: Polyclonal

Immunogen: Beta-galactosidase from E.coli

Specificity: Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-rabbit serum

as well as purified and partially purified beta galactosidase (E.coli).

Formulation: 0.02M Potassium phosphate, 0.15M Sodium chloride, pH 7.2

> Label: FITC State: Purified

State: Lyophilized purified IgG fraction

Stabilizer: 10 mg/ml BSA (immunoglobulin and protease free)

Preservative: 0.01% (w/v) Sodium azide

Label: Fluorescein isothiocyanate (molecular weight 390 daltons)

Absorption emission: 495 nm / 528 nm Molar radio: 3.5 moles FITC per mole of IgG

Reconstitution Method: Restore with 0.1 ml of deionized water (or equivalent).

Concentration: lot specific

Purification: Multi-step process including delipidation, salt fractionation and ion exchange

chromatography followed by extensive dialysis against the buffer

Conjugation: **FITC**

lacZ Rabbit Polyclonal Antibody - R1064FS

Storage: Store lyophilized at 2-8°C for 6 months or at -20°C long term.

After reconstitution store the antibody undiluted at 2-8°C for one month or (in aliquots) at -

20°C long term.

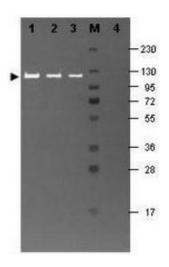

Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Database Link: P00722

Synonyms: Beta-Gal tag, lacZ tag, b0344, JW0335, Beta-Gal Fusion Protein, Lactase

Product images:

Western blotting using fluorescein conjugated anti-Beta-galactosidase tag antibody shows a band at ~117 kDa (lanes 1-3) corresponding to 60 ng, 30 ng and 15 ng, respectively of b-Gal present in partially purified preparations (arrowhead). Lane 4 shows no cross reactivity with proteins present in a non-specific control E.coli lysate. Proteins were resolved on a 4-20% Tris-glycine gel by SDS-PAGE and transferred to nitrocellulose and blocking using blocking buffer for bluorescent Western blotting. The membrane was probed with Fluorescein conjugated anti-Beta-galactosidase. [R1064F] diluted to 1/10,000. Reaction occurred for 2 hours at RT. Molecular weight estimation was made by comparison to a prestained MW marker in lane M. Fluorescence image was captured using the VersaDoc® imaging system. Other detection systems will yield similar results.
