| Product Type:          | Primary Antibodies  |
|------------------------|---|
| Applications:          | ELISA, IHC, WB  |
| Recommended Dilution:  | Western Blot: 1/1,000 - 1/5,000.<br>ELISA: 1/170,000.<br>Immunohistochemistry: 1/500 - 1/3,000.   |
| Reactivity:            | Human   |
| Host:                  | Rabbit  |
| Clonality:             | Polyclonal  |
| Immunogen:             | Human Serum Albumin   |
| Specificity:           | This antibody reacts to Serum Albumin.  |
| Formulation:           | 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2 containing 10 mg/ml Bovine<br>Serum Albumin (BSA) as stabilizer and 0.01% (w/v) Sodium Azide as preservative<br>Label: Biotin<br>State: Lyophilized<br>Label: Biotinamidocaproate N-Hydroxysuccinimide Ester (BAC)<br>Molar radio: 10-20 BAC molecules per Rabbit IgG molecule |
| Reconstitution Method: | Restore with 1.0 ml of deionized water (or equivalent).<br>For extended storage add glycerol to 50%   |
| Concentration:         | lot specific  |
| Purification:          | Affinity chromatography on Protein A  |
| Conjugation:           | Biotin  |
| Storage:               | Prior to reconstitution store at 2-8°C.<br>Following reconstitution store the antibody undiluted at 2-8°C for one month<br>or (in aliquots) at -20°C for longer.<br>Avoid repeated freezing and thawing.  |
| Stability:             | Shelf life: one year from despatch.   |
| Gene Name:             | albumin   |

|                | Albumin (ALB) Rabbit Polyclonal Antibody – R1619B  |
|----------------|--|
| Database Link: | <u>Entrez Gene 213 Human</u><br><u>P02768</u>  |
| Background:    | Albumin is a soluble, monomeric protein which comprises about one half of the blood serum protein. Albumin functions primarily as a carrier protein for steroids, fatty acids, and thyroid hormones and plays a role in stabilizing extracellular fluid volume. Mutations in this gene on chromosome 4 result in various anomalous proteins. Albumin is a globular unglycosylated serum protein of molecular weight 65,000. The human albumin gene is 16,961 nucleotides long from the putative 'cap' site to the first poly(A) addition site. It is split into 15 exons which are symmetrically placed within the 3 domains that are thought to have arisen by triplication of a single primordial domain. Albumin is synthesized in the liver as preproalbumin which has an N terminal peptide that is removed before the nascent protein is released from the rough endoplasmic reticulum. The product, proalbumin, is in turn cleaved in the Golgi vesicles to produce the secreted albumin. |
| Synonyms:      | ALB, BSA, HSA, Serum Albumin   |
