Gene Summary:This nuclear gene encodes a protein component of the larger 39S subunit of mitochondrial<br/>ribosome. This protein may also aid in the import of nuclear-encoded 5S rRNA into<br/>mitochondria. Alternative splicing results in multiple transcript variants, most of which are<br/>not predicted to encode a protein. A pseudogene of this gene is found on chromosome 16.<br/>[provided by RefSeq, Jan 2016]
