

Product datasheet for RC200088L4

FIBP (NM_004214) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: FIBP (NM_004214) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: FIBP

Synonyms: FGFIBP; FIBP-1; TROFAS

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC200088).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_004214

ORF Size: 1071 bp

FIBP (NM_004214) Human Tagged Lenti ORF Clone - RC200088L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 004214.4</u>

RefSeq Size:1429 bpRefSeq ORF:1074 bp

Locus ID: 9158

UniProt ID: <u>O43427</u> Cytogenetics: 11q13.1

MW: 41 kDa

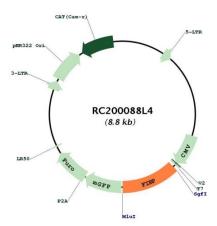

Gene Summary: Acidic fibroblast growth factor is mitogenic for a variety of different cell types and acts by

stimulating mitogenesis or inducing morphological changes and differentiation. The FIBP protein is an intracellular protein that binds selectively to acidic fibroblast growth factor (aFGF). It is postulated that FIBP may be involved in the mitogenic action of aFGF. Two transcript variants encoding different isoforms have been found for this gene. [provided by

RefSeq, Jul 2008]
