	RAI3 (GPRC5A) (NM_003979) Human Tagged ORF Clone Lentiviral Particle – RC200118L2V
MW:	40.3 kDa
Gene Summary:	This gene encodes a member of the type 3 G protein-coupling receptor family, characterized by the signature 7-transmembrane domain motif. The encoded protein may be involved in interaction between retinoid acid and G protein signalling pathways. Retinoic acid plays a critical role in development, cellular growth, and differentiation. This gene may play a role in embryonic development and epithelial cell differentiation. [provided by RefSeq, Jul 2008]
